Lesson 2: Kalman Filter

1 Background

Kalman Filter was found by Dr. Rudolf Emil Kálmán. This algorithm is a powerful filtering algorithm that has been used in many applications most notably in signal processing, control, optimization, sensor fusion, system identification -etc , and it is able to be implemented online.

2 Kalman Filter (Linear System)

Consider a linear discrete time system as following:

$$x_{k+1} = Ax_k + Bu_k + v_k$$

$$y_{k+1} = Cx_{k+1} + Du_{k+1} + w_{k+1}$$
(1)

Where:

- x_k is voltage at terminal conductor of motor
- u_k is back emf constant
- y_k is angular velocity of motor
- A is angular velocity of motor
- C is angular velocity of motor
- \bullet B is angular velocity of motor
- D is angular velocity of motor
- v_k is angular velocity of motor
- w_k is angular velocity of motor

Apply Kalman Filter on the system

Initialize:

Select any

- $\hat{x}_{0|0}$ initial state estimate
- $P_{0|0}$ positive definite error covariance matrix

Time Update

$$\hat{x}_{k+1|k} = A\hat{x}_{k|k} + Bu_k P_{k+1|k} = AP_{k|k}A^T + Q$$
(2)

Measurement Update

Supervisor: Dr.Sarot Srang

$$\hat{y}_{k+1|k} = C\hat{x}_{k+1|k} + Du_{k+1}$$

$$P_{xy,k+1|k} = P_{k+1|k}C^{T}$$

$$P_{yy,k+1|k} = CP_{k+1|k}C^{T} + R$$

$$\hat{x}_{k+1|k+1} = \hat{x}_{k+1|k} + P_{xy,k+1|k}P_{yy,k+1|k}^{-1}(y_{k} - \hat{y}_{k+1|k})$$

$$P_{k+1|k+1} = P_{k+1|k} - P_{xy,k+1|k}P_{yy,k|k+1}^{-1}P_{xy,k+1|k}^{T}$$
(3)

In terms of Kalman Gain,

$$K_{k+1} = P_{xy,k+1|k} P_{yy,k+1|k}^{-1}$$

$$\hat{x}_{k+1|k+1} = \hat{x}_{k+1|k} + K_{k+1} (y_{k+1} - C\hat{x}_{k+1|k} - Du_{k+1})$$

$$P_{k+1|k+1} = P_{k+1|k} - K_{k+1} P_{yy,k+1|k} K_{k+1}^{T}$$

$$(4)$$

3 Extended Kalman Filter (Nonlinear System)

Consider a nonlinear discrete time system as following:

$$x_{k+1} = f_d(x_k + u_k) + v_k$$

$$y_{k+1} = h_d(x_{k+1}, u_{k+1}) + w_{k+1}$$
(5)

Where:

- x_k is voltage at terminal conductor of motor
- u_k is back emf constant
- y_k is angular velocity of motor
- f_d is angular velocity of motor
- h_d is angular velocity of motor
- v_k is angular velocity of motor
- w_k is angular velocity of motor

Apply Extended Kalman Filter on the system

Initialize:

Select any

- $\hat{x}_{0|0}$ initial state estimate
- $P_{0|0}$ positive definite error covariance matrix

Time Update

$$\hat{x}_{k+1|k} = f_d(\hat{x}_{k|k}, u_k) P_{k+1|k} = A_k P_{k|k} A_k^T + Q$$
(6)

Supervisor: Dr.Sarot Srang

Measurement Update

$$\hat{y}_{k+1|k} = h_d(\hat{x}_{k+1|k}, u_{k+1})
P_{xy,k+1|k} = P_{k+1|k} C_{k+1}^T
P_{yy,k+1|k} = C_{k+1} P_{k+1|k} C_{k+1}^T + R
\hat{x}_{k+1|k+1} = \hat{x}_{k+1|k} + P_{xy,k+1|k} P_{yy,k+1|k}^{-1} (y_{k+1} - \hat{y}_{k+1|k})
P_{k+1|k+1} = P_{k+1|k} - P_{xy,k+1|k} P_{yu,k|k+1}^{-1} P_{xy,k+1|k}^T$$
(7)

In terms of Kalman Gain,

$$K_{k+1} = P_{xy,k+1|k} P_{yy,k+1|k}^{-1}$$

$$\hat{x}_{k+1|k+1} = \hat{x}_{k+1|k} + K_{k+1} [y_{k+1} - h_d(\hat{x}_{k+1|k}, u_{k+1})]$$

$$P_{k+1|k+1} = P_{k+1|k} - K_{k+1} P_{yy,k+1|k} K_{k+1}^T$$
(8)

Where from linearization of nonlinear function f_d and h_d using a Taylor series expansion, We get Jacobian matrix:

$$A_k = \frac{\partial f_d}{\partial x}|_{x = \hat{x}_{k|k}}$$
$$C_{k+1} = \frac{\partial h_d}{\partial x}|_{x = \hat{x}_{k+1|k}}$$

Unscented Kalman Filter (Nonlinear System) 4

Consider a nonlinear discrete time system as following:

$$x_{k+1} = f_d(x_k + u_k) + v_k$$

$$y_{k+1} = h_d(x_{k+1}, u_{k+1}) + w_{k+1}$$
(9)

Apply Unscented Kalman Filter on the system

Initialize:

Select any

- initial state estimate \bullet $\hat{x}_{0|0}$
- positive definite error covariance matrix

Time Update

$$X_{k|k} = [\hat{x}_{k|k} \dots \hat{x}_{k|k}] + \sqrt{n_x + \lambda} [0 \quad \sqrt{P_{k|k}} \quad -\sqrt{P_{k|k}}]$$

$$X_{k+1|k} = f_d(X_{k|k}, u_k)$$

$$\hat{x}_{k+1|k} = X_{k+1|k} w_m$$

$$P_{k+1|k} = X_{k+1|k} W X_{k+1|k}^T + Q$$
(10)

Supervisor: Dr.Sarot Srang

Measurement Update

$$X_{k+1|k}^{(r)} = \left[\hat{x}_{k+1|k} \dots \hat{x}_{k+1|k}\right] + \sqrt{n_x + \lambda} \left[0 \quad \sqrt{P_{k+1|k}} \quad - \sqrt{P_{k+1|k}}\right]$$

$$Y_{k+1|k} = h_d(X_{k+1|k}^{(r)}, u_{k+1})$$

$$\hat{y}_{k+1|k} = Y_{k+1|k}w_m$$

$$P_{xy,k+1|k} = X_{k+1|k}^{(r)}WY_{k+1|k}^T$$

$$P_{yy,k+1|k} = Y_{k+1|k}WY_{k+1|k}^T + R$$

$$K_{k+1} = P_{xy,k+1|k}P_{yy,k+1|k}^{-1}$$

$$\hat{x}_{k+1|k+1} = \hat{x}_{k+1|k} + K_{k+1}(y_{k+1} - \hat{y}_{k+1|k})$$

$$P_{k+1|k+1} = P_{k+1|k} - K_{k+1}P_{yy,k+1|k}K_{k+1}^T$$

$$(11)$$
